Section 1 – Identification

1(a) Product Identifier used on Label: Carbon Steel Beam
1(b) Other means of identification: None
1(c) Recommended use of the chemical and restrictions on use: Beam Steel. No known restrictions.
1(d) Name, address, and telephone number:
Steel Dynamics, Inc.
Long Products Group
Steel of West Virginia, Inc.
17th Street, 2nd Avenue
Huntington, WV 25703
Phone: (304) 696-8200
1(e) Emergency Phone Number: (800) 424-9300 (CHEMTREC)

Section 2 – Hazard(s) Identification

2(a) Classification of the chemical: Carbon Steel Beam is considered an article under Reach regulation (REACH REGULATION (EC) No 1907/2006) and is not subject to classification under CLP regulation (REGULATION (EC) No 1272/2008). However, Carbon Steel Beam is not exempt as an article under OSHA's Hazard Communication Standard (29 CFR 1910.1200) due to its downstream use, thus this product is considered a mixture and a hazardous material. Therefore, the categories of Health Hazards as defined in “GLOBALLY HARMONIZED SYSTEM OF CLASSIFICATION AND LABELLING OF CHEMICALS (GHS), Third revised edition ST/SG/AC.10/30/Rev. 3” United Nations, New York and Geneva, 2009 have been evaluated. Refer to Section 3, 8 and 11 for additional information.

2(b) Signal word, hazard statement(s), symbols and precautionary statement(s):

Precautionary Statement(s):

- Do not breathe dusts / fume / gas / mist.
- Wear protective gloves / protective clothing / eye protection / face protection.
- Contaminated work clothing must not be allowed out of the workplace.
- Use only outdoors or in well ventilated areas.
- Wash thoroughly after handling.
- Obtain special instructions before use.
- Do not handle until all safety precautions have been read and understood.
- Do not eat, drink or smoke when using this product.

- If exposed, concerned or feel unwell: Get medical advice/attention or call a poison center.
- If inhaled: Remove person to fresh air and keep comfortable for breathing.
- If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention.
- If on skin: Wash with plenty of water. If irritation or rash occurs: Get medical advice/attention. Wash contaminated clothing before reuse.
- If swallowed: Rinse mouth.

2(c) Hazards not otherwise classified: None Known
2(d) Unknown acute toxicity statement (mixture): None Known

Commercial steel products contain small amounts of various constituents in addition to those listed, frequently referred to as “trace” or “residual” constituent that generally originate in the raw materials. Steel products may contain the following trace or residual constituents (<0.1%) identified: aluminum, boron, calcium, lead, molybdenum, niobium (columbium), nitrogen, phosphorous, sulfur, tin, titanium, vanadium and zinc.

Section 4 – First-aid Measures

4(a) Description of necessary measures:
- **Inhalation:** Carbon Steel Beam as sold/shipped is not a likely form of exposure. However, during further processing (welding, grinding, burning, etc.), if inhaled: Remove person to fresh air and keep comfortable for breathing. If exposed, concerned or feel unwell: Get medical advice/attention.
- **Eye Contact:** Carbon Steel Beam as sold/shipped is not a likely form of exposure. However, during further processing (welding, grinding, burning, etc.), if in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue Rinsing. If eye irritation persists: Get medical advice/attention. If exposed, concerned or feel unwell: Get medical advice/attention.
- **Skin Contact:** If on skin: Wash thoroughly after handling. Wash with plenty of water. If irritation or rash occurs: Get medical advice/attention. Take off and wash contaminated clothing before reuse. If exposed, concerned or feel unwell: Get medical advice/attention.
- **Ingestion:** Carbon Steel Beam as sold/shipped is not a likely form of exposure. However, during further processing (welding, grinding, burning, etc.), if exposed, concerned or feel unwell: Get medical advice/attention.

4(b) Most important symptoms/effects, acute and delayed (chronic):
- **Inhalation:** Carbon Steel Beam as sold/shipped is not likely to present an acute or chronic health effect.
- **Eye:** Carbon Steel Beam as sold/shipped is not likely to present an acute or chronic health effect.
- **Skin:** Carbon Steel Beam as sold/shipped is not likely to present an acute or chronic health effect.
- **Ingestion:** Carbon Steel Beam as sold/shipped is not likely to present an acute or chronic health effect.

4(c) Immediate Medical Attention and Special Treatment: None Known

Section 5 – Fire-fighting Measures

5(a) Suitable (and unsuitable) Extinguishing Media: Not Applicable for Carbon Steel Beam as sold/shipped. Use extinguishers appropriate for surrounding materials.

5(b) Specific Hazards arising from the chemical: Not Applicable for Carbon Steel Beam as sold/shipped. When burned, toxic smoke, fume and vapor may be emitted.

5(c) Special protective equipment and precautions for fire-fighters: Self-contained NIOSH approved respiratory protection and full protective clothing should be worn when fumes and/or smoke from fire are present. Heat and flames cause emittance of acrid smoke and fumes. Do not release runoff from fire control methods to sewers or waterways. Firefighters should wear full face-piece self-contained breathing apparatus and chemical protective clothing with thermal protection. Direct water stream will scatter and spread flames and, therefore, should not be used.

Section 6 - Accidental Release Measures

6(a) Personal Precautions, Protective Equipment and Emergency Procedures: Not Applicable for Carbon Steel Beam as sold/shipped. For spills involving finely divided particles, clean-up personnel should be protected against contact with eyes and skin. If material is in a dry state, avoid inhalation of dust.

6(b) Methods and materials for containment and clean up: Not Applicable for Carbon Steel Beam as sold/shipped. Collect material in appropriate, labeled containers for recovery or disposal in accordance with federal, state, and local regulations. Follow applicable OSHA regulations (29 CFR 1910.120) and all other pertinent state and federal requirements.

Section 7 - Handling and Storage

7(a) Precautions for safe handling: Not Applicable for Carbon Steel Beam as sold/shipped, however further processing (welding, burning, grinding, etc.) with the potential for generating high concentrations of airborne particulates should be evaluated and controlled as necessary. Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Use only outdoors or in well ventilated areas. Practice good housekeeping. Avoid breathing metal fumes and/or dust. Do not eat, drink or smoke when using this product. Cut resistant gloves and sleeves should be worn when working with steel products.

7(b) Conditions for safe storage, including any incompatibilities: Store away from acids and incompatible materials.
### Section 8 - Exposure Controls / Personal Protection

#### 8(a) Occupational Exposure Limits (OELs): Carbon Steel Beam

As sold/shipped in its physical form does not present an inhalation, ingestion or contact hazard, nor would any of the following exposure data apply. However, operations such as burning, welding (high temperature), sawing, brazing, machining, grinding, etc. may produce fumes and/or particulates. The following exposure limits are offered as reference for an experienced industrial hygienist to review.

**NE** = None Established

1. OSHA Permissible Exposure Limits (PELs) are 8-hour TWA (time-weighted average) concentrations unless otherwise noted. A (C) designation denotes a ceiling limit, which should not be exceeded during any part of the working exposure unless otherwise noted. A Peak is defined as the acceptable maximum peak for a maximum duration above the ceiling concentration for an eight-hour shift. A skin notation refers to the potential significant contribution to the overall exposure by the cutaneous route, either by contact with vapors or, of probable greater significance, by direct skin contact with the substance. A Short Term Exposure Limit (STEL) is defined as a 15-minute exposure, which should not be exceeded at any time during a workday. An Action level (AL) is used by OSHA and NIOSH to express a health or physical hazard. They indicate the level of a harmful or toxic substance/activity, which requires medical surveillance, increased industrial hygiene monitoring, or biological monitoring. Action Levels are generally set at one half of the PEL but the actual level may vary from standard to standard. The intent is to identify a level at which the vast majority of randomly sampled exposures will be below the PEL.

2. Threshold Limit Values (TLVs) established by the American Conference of Governmental Industrial Hygienists (ACGIH) are 8-hour TWA concentrations unless otherwise noted. A Short Term Exposure Limit (STEL) is defined as the maximum concentration to which workers can be exposed for a short period of time (15 minutes) for only four times throughout the day with at least one hour between exposures. A “skin” notation refers to the potential significant contribution to the overall exposure by the cutaneous route, either by contact with vapors or, of probable greater significance, by direct skin contact with the substance. ACGIH-TLVs are only recommended guidelines based upon consensus agreement of the membership of the ACGIH. As such, the ACGIH TLVs are for guideline use purposes and are not legal regulatory standards for compliance purposes. The TLVs are designed for use by individuals trained in the discipline of industrial hygiene relative to the evaluation of exposure to various chemical or biological substances and physical agents that may be found in the workplace.

3. The National Institute for Occupational Safety and Health Recommended Exposure Limits (NIOSH-REL) - Compendium of Policy and Statements. NIOSH, Cincinnati, OH (1992). NIOSH is the federal agency designated to conduct research relative to occupational safety and health. As is the case with ACGIH TLVs, NIOSH RELs are for guideline purposes only and as such are not legal, regulatory limits for compliance purposes.

4. The “immediately dangerous to life or health air concentration values (IDLHs)” are used by NIOSH as part of the respirator selection criteria and were first developed in the mid-1970s by NIOSH. The Documentation for Immediately Dangerous to Life or Health Concentrations (IDLHs) is a compilation of the rationale and sources of information used by NIOSH during the original determination of 387 IDLHs and their subsequent review and revision in 1994.

5. PNOR (Particulates Not Otherwise Regulated). All inert or nuisance dusts, whether mineral, inorganic, or organic, not listed specifically by substance name are covered by a limit which is the same as the inert or nuisance dust limit of 15 mg/m³ for total dust and 5.0 mg/m³ for the respirable fraction.

6. Inhalaible fraction. The concentration of inhalable particulate for the application of this TLV is to be determined from the fraction passing a size-selector with the characteristics defined in the ACGIH 2016 TLVs® and BEIs® (Biological Exposure Indices) Appendix D, paragraph A.

7. PNOS (Particulates Not Otherwise Specified). Particulates identified under the PNOS heading are “nuisance dusts” containing no asbestos and <1% crystalline silica.

8. Respirable fraction. The concentration of respirable dust for the application of this limit is to be determined from the fraction passing a size-selector with the characteristics defined in ACGIH 2016 TLVs® and BEIs® Appendix D, paragraph C.

#### 8(b) Appropriate Engineering Controls

Use controls as appropriate to minimize exposure to metal fumes and dusts during handling operations. Provide general or local exhaust ventilation systems to minimize airborne concentrations. Local exhaust is necessary for use in enclosed or confined spaces. Provide sufficient general/local exhaust ventilation in pattern/volume to control inhalation exposures below current exposure limits.

#### 8(c) Individual Protection Measures:
Section 8 - Exposure Controls / Personal Protection (continued)

- **Respiratory Protection:** Use a positive-pressure-demand full-face supplied air respirator with escape bottle or SCBA (Immediately dangerous to life or health) for any of the constituents, or there is a possibility of an uncontrolled release or exposure levels are unknown, then use a positive-pressure demand full-face supplied air respirator with escape bottle or SCBA.

- **Eye Protection:** Wear appropriate eye protection to prevent eye contact. For operations which result in elevating the temperature of the product to or above its melting point or result in the generation of airborne particulates, use safety glasses or goggles as required for welding, burning, sawing, brazing, grinding or machining operations.

- **Skin Protection:** Wear appropriate personal protective clothing to prevent skin contact. Cut resistant gloves and sleeves should be worn when working with steel products. For operations which result in elevating the temperature of the product to or above its melting point or result in the generation of airborne particulates, use protective clothing, and gloves to prevent skin contact. Protective gloves should be worn as required for welding, burning or handling operations. Contaminated work clothing must not be allowed out of the workplace.

- **Other protective equipment:** An eyewash fountain and deluge shower should be readily available in the work area.

Section 9 - Physical and Chemical Properties

- **9(a) Appearance (physical state, color, etc.):** Solid, metallic gray
- **9(b) Odor:** Odorless
- **9(c) Odor Threshold:** NA
- **9(d) pH:** NA
- **9(e) Melting Point/Freezing Point:** ~2650°F (~1455°C) / NA
- **9(f) Initial Boiling Point and Boiling Range:** ND
- **9(g) Flash Point:** NA
- **9(h) Evaporation Rate:** NA
- **9(i) Flammability (solid, gas):** Non-flammable, non-combustible
- **9(j) Upper/lower Flammability or Explosive Limits:** NA
- **9(k) Vapor Pressure:** NA
- **9(l) Vapor Density (Air = 1):** NA
- **9(m) Relative Density:** Not Available
- **9(n) Solubility(ies):** NA
- **9(o) Partition Coefficient n-octanol/water:** ND
- **9(p) Auto-ignition Temperature:** NA
- **9(q) Decomposition Temperature:** ND
- **9(r) Viscosity:** NA

Section 10 - Stability and Reactivity

- **10(a) Reactivity:** Not Determined (ND) for product in a solid form. Do not use water on molten metal.
- **10(b) Chemical Stability:** Steel products are stable under normal storage and handling conditions.
- **10(c) Possibility of hazardous reaction:** None Known
- **10(d) Conditions to Avoid:** Storage with strong acids or calcium hypochlorite
- **10(e) Incompatible Materials:** Will react with strong acids to form hydrogen. Iron oxide dusts in contact with calcium hypochlorite evolve oxygen and may cause an explosion.
- **10(f) Hazardous Decomposition Products:** Thermal oxidative decomposition of steel products can produce fumes containing oxides of iron and manganese as well as other alloying elements.

Section 11 - Toxicological Information

11 Information on toxicological effects: The following toxicity data has been determined for **Carbon Steel Beam** when further processed using the information available for its components applied to the guidance on the preparation of an SDS under the GHS requirements of OSHA and the EU CPL.
Carbon Steel Beam

Safety Data Sheet (SDS)  
Revision: 04/11/2017

| Skin/Dermal Sensitization (covers Category 1) | NR*   | 1d   | Warning       | May cause an allergic skin reaction. |
| Carcinogenicity (covers Categories 1A, 1B and 2) | NA*   | 2g   | Warning       | Suspected of causing cancer. |

* NR: Not Rated, semi-formed steel products are considered articles under Reach regulation (REACH REGULATION (EC) No 1907/2006) and are not subject to classification under CLP regulation (REGULATION (EC) No 1272/2008).

Toxicological data listed below are presented regardless to classification criteria. Individual hazard classification categories where the toxicological information has met or exceeded a classification criteria threshold are listed above.

a. No LC$_{50}$ or LD$_{50}$ has been established for Carbon Steel Beam as a mixture. The following data has been determined for the components:
   - **Iron**: Rat LC$_{50}$ = 98.6 g/kg (REACH); Rat LD$_{50}$ = 1060 mg/kg (IUCLID); Rabbit LD$_{50}$ = 984 mg/kg (IUCLID); Rabbit LD$_{50}$ = 890 mg/kg (IUCLID); Guinea Pig LD$_{50}$ = 20 g/kg (TOXNET)
   - **Nickel**: LD$_{50}$ = 9000 mg/kg (Oral/Rat)
   - **Copper**: Rat LD$_{50}$ = 481 mg/kg (REACH); Rat LD$_{50}$ > 2500 mg/kg (REACH)
   - **Manganese**: Rat LD$_{50}$ > 2000 mg/kg (REACH); Rat LD$_{50}$ > 9000 mg/kg (NLM Toxnet)
   - **Silicon**: LD$_{50}$ = 3160 mg/kg (Oral/Rat)
   - **Carbon**: LD$_{50}$ > 10,000 mg/kg (Oral/Rat)

b. No Skin (Dermal) Irritation data available for Carbon Steel Beam as a mixture or its components as a mixture.

c. No Eye Irritation data available for Carbon Steel Beam as a mixture. The following Eye Irritation information was found for the components:
   - **Iron**: Causes eye irritation.
   - **Silicon**: Slight eye irritation in rabbit protocol.
   - **Nickel**: Slight eye irritation from particulate abrasion only.

d. No Skin (Dermal) Sensitization data available for Carbon Steel Beam as a mixture. The following Skin (Dermal) Sensitization information was found for the components:
   - **Iron**: May cause allergic skin sensitization.

e. No Respiratory Sensitization data available for Carbon Steel Beam as a mixture or its components.

f. No Germ Cell Mutagenicity data available for Carbon Steel Beam as a mixture. The following Mutagenicity and Genotoxicity information was found for the components:
   - **Iron**: IUCLID has found some positive and negative findings in vitro.
   - **Nickel**: EURAR has found positive results in vitro and in vivo but insufficient data for classification.

g. Carcinogenicity: IARC, NTP, and OSHA do not list Carbon Steel Beam as carcinogens. The following Carcinogenicity information was found for the components:
   - **Welding Fumes** - IARC Group 2B carcinogen, a mixture that is possibly carcinogenic to humans.
   - **Nickel and certain nickel compounds** – Group 2B - metallic nickel Group 1 - nickel compounds ACGIH confirmed human carcinogen. Nickel – EURAR insufficient evidence to conclude carcinogenic potential in animals or humans; suspect carcinogen classification Category 2 Suspected of causing cancer.
   - **Chromium (as metal and trivalent chromium compounds)** – IARC Group 3 carcinogens, not classifiable as to their human carcinogenicity

h. No Toxic Reproduction data available for Carbon Steel Beam as a mixture. The following Toxic Reproductive information was found for the components:
   - **Nickel**: Effects on fertility.

i. No Specific Target Organ Toxicity (STOT) following a Single Exposure data available for Carbon Steel Beam as a mixture. The following STOT following a Single Exposure data was found for the components:
   - **Iron**: Irritating to Respiratory tract.

j. No Specific Target Organ Toxicity (STOT) following Repeated Exposure data was available for Carbon Steel Beam as a mixture. The following STOT following Repeated Exposure data was found for the components:
The following health hazard information is provided regardless to classification criteria and is based on the individual component(s) and potential resultant components from further processing:

### Acute Effects:

- **Inhalation**: Excessive exposure to high concentrations of metal dust may cause irritation to the eyes, skin and mucous membranes of the upper respiratory tract. Excessive inhalation of fumes of freshly formed metal oxide particles sized below 1.5 micrometer and usually between 0.02-0.05 micrometers from many metals can produce an acute reaction known as “metal fume fever”. Symptoms consist of chills and fever (very similar to and easily confused with flu symptoms), metallic taste in the mouth, dryness and irritation of the throat followed by weakness and muscle pain. The symptoms come on in a few hours after excessive exposures and usually last from 12 to 48 hours. Long-term effects from metal fume fever have not been noted. Freshly formed oxide fumes of manganese have been associated with causing metal fume fever.

- **Eye**: Excessive exposure to high concentrations of metal dust may cause irritation to the eyes.

- **Skin**: Skin contact with metal dusts may cause irritation or sensitization, possibly leading to dermatitis. Skin contact with metallic fumes and dusts may cause physical abrasion.

- **Ingestion**: Ingestion of harmful amounts of this product as distributed is unlikely due to its solid insoluble form. Ingestion of metal dust may cause nausea or vomiting.

### Acute Effects by component:

- **Iron and iron oxides**: Iron is harmful if swallowed, causes skin irritation, and causes eye irritation. Contact with iron oxide has been reported to cause skin irritation and serious eye damage. Particles of iron or iron compounds, which become imbedded in the eye, may cause rust stains unless removed fairly promptly.

- **Manganese and manganese oxides**: Manganese and Manganese oxide are harmful if swallowed.

- **Carbon**: Not Reported/Not classified.

- **Chromium and chromium oxides**: Hexavalent chrome causes damage to gastrointestinal tract, lung, severe skin burns and eye damage, serious eye damage, skin contact may cause an allergic skin reaction. Inhalation may cause allergic or asthmatic symptoms or breathing difficulties.

- **Silicon and silicon oxides**: May be harmful if swallowed.

- **Copper and copper oxides**: Copper may cause allergic skin reaction. Copper oxide is harmful if swallowed, causes skin and eye irritation, and may cause an allergic skin reaction.

- **Nickel and nickel oxides**: Nickel may cause allergic skin sensitization. Nickel oxide may cause an allergic skin.

### Delayed (chronic) Effects by component:

- **Iron and iron oxides**: Chronic inhalation of excessive concentrations of iron oxide fumes or dusts may result in the development of a benign pneumoconiosis, called siderosis, which is observable as an X-ray change. No physical impairment of lung function has been associated with siderosis. Inhalation of excessive concentrations of ferric oxide may enhance the risk of lung cancer development in workers exposed to pulmonary carcinogens. Iron oxide is listed as a Group 3 (not classifiable) carcinogen by the International Agency for Research on Cancer (IARC).

- **Manganese and manganese oxides**: Chronic exposure to high concentrations of manganese fumes and dusts may adversely affect the central nervous system with symptoms including languor, sleepiness, weakness, emotional disturbances, spastic gait, mask-like facial expression and paralysis. Animal studies indicate that manganese exposure may increase susceptibility to bacterial and viral infections. Occupational overexposure (Manganese) is a progressive, disabling neurological syndrome that typically begins with relatively mild symptoms and evolves to include altered gait, fine tremor, and sometimes, psychiatric disturbances. May cause damage to lungs with repeated or prolonged exposure. Neurobehavioral alterations in worker populations exposed to manganese oxides include: speed and coordination of motor function are especially impaired.

- **Carbon**: Chronic inhalation may lead to decreased pulmonary function.

- **Silicon and silicon oxides**: Silicon dusts are a low health risk by inhalation and should be treated as a nuisance dust. Eye contact with pure material can cause particulate irritation. Skin contact with silicon dusts may cause physical abrasion.

- **Copper and copper oxides**: Inhalation of high concentrations of freshly formed oxide fumes and dusts of copper can cause metal fume fever. Chronic inhalation of copper dust has caused, in animals, hemolysis of the red blood cells, deposition of hemofuscin in the liver and pancreas, injury to lung cells and gastrointestinal symptoms.
• Chromium and chromium oxides: The health hazards associated with exposure to chromium are dependent upon its oxidation state. The metal form (chromium as it exists in this product) is of very low toxicity. The hexavalent form is very toxic. Repeated or prolonged exposure to hexavalent chromium compounds may cause respiratory irritation, nosebleed, ulceration and perforation of the nasal septum. Industrial exposure to certain forms of hexavalent chromium has been related to an increased incidence of cancer. NTP (The National Toxicology Program) Fourth Annual report on Carcinogens cites “certain Chromium compounds” as human carcinogens. ACGIH has reviewed the toxicity data and concluded that chromium metal is not classifiable as a human carcinogen. Hexavalent chromium may cause genetic defects and is suspected of damaging the unborn child. Developmental toxicity in the mouse, suspected of damaging fertility or the unborn child.

• Nickel and nickel oxides: Exposure to nickel dusts and fumes can cause sensitization dermatitis, respiratory irritation, asthma, pulmonary fibrosis, edema, and may cause nasal or lung cancer in humans. Nickel causes damage to lungs through prolonged or repeated inhalation exposure. IARC lists nickel and certain nickel compounds as Group 2B carcinogens (sufficient animal data). ACGIH 2016 TLVs® and BEIs lists insoluble nickel compounds as confirmed human carcinogens. Nickel is suspected of damaging the unborn child.

Section 12 - Ecological Information

12(a) Ecotoxicity (aquatic & terrestrial): No Data Available for Carbon Steel Beam as sold/shipped. However, individual components of the product when processed have been found to be toxic to the environment. Metal dusts may migrate into soil and groundwater and be ingested by wildlife as follows:

- Iron Oxide: LC₅₀ >1000 mg/L; Fish 48 h-EC₅₀ > 100 mg/L (Currenta, 2008k); 96 h-EC₅₀ ≥ 50,000 mg/L. Test substance: Bayferrox 130 red (95 – 97% Fe₂O₃; < 4% SiO₂ and Al₂O₃) (Bayer, 1989a).
- Hexavalent Chrome: EU RAR listed as category 1, found acute EC50 and LD50 to algae and invertebrates < 1 mg.
- Nickel Oxide: IUCLID found LC₅₀ in fish, invertebrates and algae > 100 mg/l.

12(b) Persistence & Degradability: No Data Available for Carbon Steel Beam as sold/shipped or individual components.

12(c) Bioaccumulative Potential: No Data Available for Carbon Steel Beam as sold/shipped or individual components.

12(d) Mobility (in soil): No data available for Carbon Steel Beam as sold/shipped. However, individual components of the product have been found to be absorbed by plants from soil.

12(e) Other adverse effects: None Known

Additional Information:

Hazard Category: Not Reported
Hazard Symbol: No Symbol
Hazard Statement: No Statement

Section 13 - Disposal Considerations

Disposal: Steel scrap should be recycled whenever possible. Product dusts and fumes from processing operations should also be recycled, or classified by a competent environmental professional and disposed of in accordance with applicable federal, state and local regulations.

Container Cleaning and Disposal: Follow applicable federal, state and local regulations. Observe safe handling precautions. European Waste Catalogue (EWC): 16-01-17 (ferrous metals), 12-01-99 (wastes not otherwise specified), 16-03-04 (off specification batches and unused products), or 15-01-04 (metallic packaging).

Please note this information is for Carbon Steel Beam in its original form. Any alterations can void this information.

Section 14 - Transport Information

14 (a-g) Transportation Information:

US Department of Transportation (DOT) under 49 CFR 172.101 does not regulate Carbon Steel Beam as a hazardous material. All federal, state, and local laws and regulations that apply to the transport of this type of material must be adhered to.

Section 14 - Transport Information

Transport Dangerous Goods (TDG) Classification: Carbon Steel Beam does not have a TDG classification.

Section 15 - Regulatory Information

Regulatory Information: The following listing of regulations relating to a Steel Dynamics product may not be complete and should not be solely relied upon for all regulatory compliance responsibilities. This product and/or its constituents are subject to the following regulations:

OSHA Regulations: Air Contaminant (29 CFR 1910.1000, Table Z-1, Z-2, Z-3): The product, Carbon Steel Beam as a whole is not listed. However, individual components of the product are listed: Refer to Section 8, Exposure Controls and Personal Protection.

EPA Regulations: The product, Carbon Steel Beam is not listed as a whole. However, individual components of the product are listed:

<table>

Regulations Key:

CAA Clean Air Act (42 USC Sec. 7412; 40 CFR Part 61 [As of: 8/18/06])
CERCLA Comprehensive Environmental Response, Compensation and Liability Act (42 USC Secs. 9601(14), 9603(a); 40 CFR Sec. 302.4, Table 302.4, Table 302.4 and App. A)
CWA Clean Water Act (33 USC Secs. 1311; 134(i-b), (c), (e), (g); 136(b), (c), 137(b), (c) [as of 8/2/06])
RCRA Resource Conservation Recovery Act (42 USC Sec. 6921; 40 CFR Part 261 App VIII)
SARA Superfund Amendments and Reauthorization Act of 1986 Title III Section 302 Extremely Hazardous Substances (42 USC Secs. 11023, 13106; 40 CFR Sec. 372.65) and Section 313 Toxic Chemicals (42 USC secs. 11023, 13106; 40 CFR Sec. 372.65 [as of 6/30/05])
TSCA Toxic Substance Control Act (15 U.S.C. s/s 2601 et seq. [1976])
SDWA Safe Drinking Water Act (42 U.S.C. s/s 300f et seq. [1974])

State Regulations: The product, Carbon Steel Beam as a whole is not listed in any state regulations. However, individual components of the product are listed in various state regulations:

Pennsylvania Right to Know: Contains regulated material in the following categories:

- Hazardous Substances: Chromium, Manganese, Nickel, Silicon, Copper
- Environmental Hazards: Chromium, Manganese, Nickel, Copper
- Special Hazardous Substance: Chromium, Nickel

California Prop. 65: Contains elements known to the State of California to cause cancer or reproductive toxicity. This includes Nickel.
New Jersey: Contains regulated material in the following categories:
- Hazardous Substance: Chromium, Manganese, Nickel, Silicon, Copper
- Environmental Hazards: Chromium, Manganese, Nickel, Silicon
- Special Hazardous Substance: Chromium, Nickel, Manganese, Silicon, Copper

Minnesota: Chromium, Manganese, Nickel

Massachusetts: Chromium, Manganese (compounds), Nickel (compounds), Copper, Silicon

Other Regulations:

WHMIS Classification (Canadian): The product, Carbon Steel Beam is not listed as a whole. However individual components are listed.

<table>

</table>

HEALTH = 1, Denotes possible chronic hazard if airborne dusts or fumes are generated. Irritation or minor reversible injury possible.

FIRE = 0, Materials that will not burn.

PHYSICAL HAZARD = 0, Materials that are normally stable, even under fire conditions, and will not react with water, polymerize, decompose, condense, or self-react. Non-explosives.

National Fire Protection Association (NFPA)

HEALTH = 1, Exposure could cause irritation but only minor residual injury even if no treatment is given.

FLAMMABILITY = 0, Materials that will not burn.

INSTABILITY = 0, Normally stable, even under fire exposure conditions, and are not reactive with water.
